BAD, BAD, BAD BLOOD.

Some blood is bad because it is peer and weak. Some is bad because it contains impurities. Some men have such bad blood that the wonder is it does not poisson the mosquitoes who come to bite them.

The rich red color of good blood is owing to the iron which is present. Blood which has not enough from in it is always unsatisfactory. The persons in whose veins it circulates cannot be said to enjoy good health.

The efforts of expert chemists to produce a preparation of iron which can be assimilated with the blood have resulted in that perfect preparation which is an important part of Brown's Iron Bitters. It is the only one which reaches the desired good.

Weak, poor, thin bload may be one of the prod strugg and Impure blood mry be purnied by the use of that Creet han beiters. Event then bitters.
